Multi SMD LED RGB

DESCRIPTION

The VLMRGB611.. is a high brightness tricolor LED designed primarily for interior automotive lighting, RGB displays and backlights. It is using the popular 3528 SMD package with white reflector and lambertian emission characteristic. The PLCC-6 package allows independent individual driving of each chip also in serial circuits and thus a gapless coverage of a wide color space by additive color mixing. It provides high reliability in a large temperature range from -40 °C to +110 °C, using highly suitable UV stable package materials and corrosion resistant metal surfaces.

PRODUCT GROUP AND PACKAGE DATA

Product group: LEDPackage: SMD PLCC-6Product series: RGB

• Angle of half intensity: ± 60°

FEATURES

- Utilizing high brightness AllnGaP and InGaN chip technologies
- 6 pin RGB SMD LED package allows independent control of each chip
- Compact package outline dimensions (L x W x H in mm): 3.5 x 2.8 x 1.45
- AEC-Q101 qualified, according to version D
- Qualified according to JEDEC[®] moisture sensitivity level 2
- · Compatible to IR reflow soldering
- Operation temperature range: -40 °C to 110 °C
- Excellent corrosion robustness (H₂S)
- ESD-withstand voltage: up to 2 kV according to JESD22-A114-B
- · Luminous intensities and colors categorized per reel
- Material categorization: for definitions of compliance please see <u>www.vishav.com/doc?99912</u>

APPLICATIONS

- · Automotive, interior lighting
- · Wide range of accent and decorative lighting
- · Displays: full color message and displays video boards
- Consumer appliances: backlight LCDs, PDAs, TVs
- Industry: white goods such as ovens, microwaves, etc.

Note

The above classification represents the brightness range which includes only a few brightness groups. Only one group per color will be shipped on each reel (there will be no mixing of two groups on each reel).

In order to ensure availability, single brightness groups will not be orderable.

In a similar manner for colors where wavelength groups are measured and binned, single wavelength groups will be shipped on any one reel. In order to ensure availability, single wavelength groups will not be orderable

DRY PACKING

The reel is packed in an anti-humidity bag to protect the devices from absorbing moisture during transportation and storage.

FINAL PACKING

The sealed reel is packed into a cardboard box. A secondary cardboard box is used for shipping purposes.

RECOMMENDED METHOD OF STORAGE

Dry box storage is recommended as soon as the aluminum bag has been opened to prevent moisture absorption. The following conditions should be observed, if dry boxes are not available:

- Storage temperature 10 °C to 30 °C
- Storage humidity ≤ 60 % RH max.

After more than 1 year under these conditions moisture content will be too high for reflow soldering.

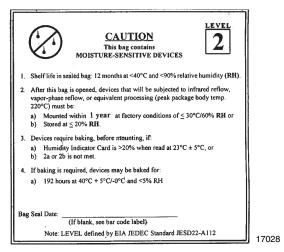

In case of moisture absorption, the devices will recover to the former condition by drying under the following condition:

192 h at 40 °C + 5 °C / - 0 °C and < 5 % RH (dry air / nitrogen) or

96 h at 60 °C + 5 °C and < 5 % RH for all device containers or

24 h at 100 °C + 5 °C not suitable for reel or tubes.

An EIA JEDEC standard JESD22-A112 level 2 label is included on all aluminum dry bags.

Example of JESD22-A112 level 2 label

ESD PRECAUTION

Proper storage and handling procedures should be followed to prevent ESD damage to the devices especially when they are removed from the antistatic shielding bag. Electrostatic sensitive devices warning labels are on the packaging.

VISHAY SEMICONDUCTORS STANDARD BAR CODE LABELS

The Vishay Semiconductors standard bar code labels are printed at final packing areas. The labels are on each packing unit and contain Vishay Semiconductors specific data.
